Gold Reaches $1,200/oz Target!

Gold Fulfilling Mid-July Forecast for Surge to 1200.0/GC;
Silver Testing 3-6 Month Target (1900.0/SI) at Same Time!!
2-3 Month Top Expected at These Levels…

Drop into January 2010 Probable (Potentially Stretching into April 2010)!

In late-July, we wrote to you and shared Eric Hadik's July 18, 2009 analysis for a new surge in Gold & Silver… that should take Gold above $1200.0/oz. and Silver above $19.00/oz. This is what was published then:

> July 18, 2009 ***Weekly Re-Lay***: *"The action of the past week reinforces the overall strength in Gold & Silver…Based on the lows of the past week, Gold & Silver are …likely to extend this advance…Gold & Silver have some pretty bullish potential…Gold could easily reach 1050--1070 and has a decent chance of accelerating above 1200.0/GC while Silver could see a surge back to 1900.0/SI."*

As Gold & Silver were advancing - in September - we wrote to you again and explained why Eric was still looking for $1,200 Gold & $19.00 Silver. In early-October, as Gold was attaining its first target - at 1050--1070.0/GC - Eric explained why multiple cycles were projecting an immediate extension to this advance. Throughout this time, we kept readers focused on $1,200/GC & 1900.0/SI as the ultimate upside targets!

The first crucial cycle - in early-October 2009 - provided a dramatic (fundamental; behind-the-scenes) confirmation to this technical & cyclical outlook, which could/should propel Gold & Silver higher into 2013! Eric discusses this in *INSIIDE Track*. ***This event could dramatically alter our entire financial structure!!!***

Now that Gold & Silver have met these 6-12 month upside targets, they should see a significant correction… throughout December and into important cycles in early-2010. For the past 6-9 months, Eric has discussed two critical periods - in the first half of 2010 - that should pinpoint intervening (ascending) lows in an ongoing Gold bull market. *These cycles could be the next opportunity for investors to enter this accelerating advance!*

However, there is another opportunity that is also developing. It has to do with what Eric calls the *'Bubble of the Decade'* pattern and involves a market that has been rising since early-2000. This market - and related ones - are expected to see a sharp decline in 2010… and beyond… as the *'bubble'* bursts. The November 2009 *INSIIDE Track* discussed this possibility and the December 2009 *INSIIDE Track* elaborates on it.

These issues also update Eric's outlook for Stock Indices, now that cycles have turned back up (as of the early-November cycle low). An overall advance - into **March 2010** - is still what he projects. *Eric has not veered from this 6-12 month projection since he first made it in March 2009!*

Stocks Testing 10,395--10,459/DJIA: 'Upside Objective/Resistance for 2009'!

Stock Indices have reached their primary upside target for 2009. This has been discussed since the March 6, 2009 bottom and has been the focus for traders and investors, ever since. The April 2009 *INSIIDE* *Track* (written March 31, 2009) recounts what Eric stated then…

> 3/31/09 - *"…the DJIA reached…a web of intermediate (3-6 month) downside wave targets - at **6,421 - 6,524/DJIA** - during its latest cycle low, on February 23 - March 6, 2009…As a result, the March 6th bottom could hold through the rest of 2009…the most noteworthy level for the rest of the year is…**10,459/DJIA**…It would not surprise me to see the DJIA retest this level - at **10,459** - before it ushers in any future waves down (to new lows).*
>
> *This is reinforced by a 50% retracement/rebound of the 2007 - 2009 decline… creating a range of resistance at **10,395 - 10,459/DJIA**…This range should be viewed as the upside objective AND major resistance for any rallies in 2009…3-6 month AND 6-12 month traders should have averaged back into equities - on March 2 - 6, 2009 - buying at 7,058 down to 6,469/DJIA… or an average entry of about 6,763/DJIA."* Copyright 3/31/09 - *ITTC*

To place this in perspective, it is important to review two major projections. The first was from mid-to-late-2007 and called for a 35-50% drop - beginning in late-2007. The second was for a 6-12 month bottom in Stock Indices, ***on/around March 6, 2009***, advising 6-12 month investors to buy the Indices on a drop toward ***6,450/DJIA***. *The DJIA bottomed on* ***March 6, 2009*** *at* ***6,469/DJIA!*** The following is a sampling of readers' feedback:

"…thank you for information on March 6, 2009 being the low of the stock market before it takes off."
Gary D. - 3/04/09

"Nice call for a turnaround on the 6th!!"
Thomas R. - 3/27/09

"You have been amazingly accurate!"
Lee A. - 6/18/09

"Congratulations on your market bottom call in early March!"
Mike W. - 4/23/09

Of course, *buying* Stock Indices in early-March would not have meant as much if these readers had not *sold* the market in late-2007. Beginning in April 2007 and continuing into mid-2008, Eric repeatedly warned that late-2007 would trigger a 1-2 year decline of up to 50% in Stock Indices. That is why readers stated things like:

"It's about a year and a half...I'm impressed by your forecasts... you called the 2007 top of the Dow well in advance... Congratulations!"
Beniamino S. - 1/06/09

"...your timing is remarkable...when you say the Dow could lose up to 50% of its value..."
Donald S. - 9/15/08

"...congrats for the excellent forecasting provided by IT during the recent period of worldwide market turbulence!"
Paul D. - 11/07/08

"I've saved lots of money on my 401K since you called the top last year."
William C. - 9/30/08

__But,__ __what__ __should__ __traders__ __expect__ __next__??? The following are important projections that are close to reaching fruition. The ***__first__ __half__ __of__ __December__*** should trigger important reversals, leading into year-end…

Cycles in Several Markets Align on __December__ __2/3rd__;
Dollar Has MAJOR Support Near 74.85/DX…
Euro Has Corresponding Resistance Just Above 1.5000!

Precious Metals, Energy Markets, Interest Rate futures & Stock Indices are all signaling reversals in the coming weeks. New trades are now being signaled and sharp corrections could follow! Eric's outlook in Gold & Silver is reinforcing the decisive nature of this period. His recent observations have provided readers with a lot to consider - with regard to their investments and financial well-being - in 2010--2013. It is this type of analysis that prompted readers to write the following:

> *"Your December 2009 issue strikes us with the sense of importance…Your analysis and the implications of same deserve consideration by any serious investors…We feel an urgency about communicating your very probing analysis..."*
>
> Ted W. - 11/25/09

> *"Your material is second to none."*
>
> John F. - 11/13/09

> *"Great call on the gold!"*
>
> R. B. - 11/03/09

So, what does Eric expect in 2010--2013'??? *How about a major financial 'bubble' peaking in late-2009 and bursting in 2010?! Recent action has honed what to expect and how this bubble would impact everyone. There is also Eric's ongoing forecast (since 2001) for a terminal decline in the US Dollar - into 2013?! And his analysis for a new bear market in Stock Indices, __beginning__ __in__ __2010__… but not until the next upside target (above 10,395--10,459/DJIA) is reached. This is the objective for the entire advance, not just for 2009!!!*

All of this reinforces the analysis that Eric provided to subscribers in late-2007 (see below; he also placed ads in magazines and provided multiple interviews that were carried on *ABC-News*, *CBS-News* & *Fox-News* websites). The action of the past 2+ years has POWERFULLY validated his outlook for 2007--2013:

> **10/31/__2007__** ***INSIIDE Track****: "Stock indices are expected to begin a larger-scale correction in Nov... enter a 2-3 year bear market, resulting in a downward trend (and lower yearly closes) in 2008..."*

> **12/03/__2007__** ***INSIIDE Track:*** *"Stock indices have fulfilled multiple cycles - on multiple levels - in multiple (diverse) arenas, setting the stage for a more prolonged bear market...**__the__ __8-10__ __year__ __wave__ __structure__ __calls__ __for__ __a__ __31-33__ __month__ __decline__**...Longer-term traders & investors (3-5 year or longer) should have exited another 5-10% of longs in early-November, reducing the current equity market investment down to about 15 - 40% (having exited 60 - 85% at an avg. of about 13,000/DJIA)."*
>
> [emphasis added]

Are You Ready for 2010--2013?

DON'T BE SURPRISED… GET ON THE INSIIDE TRACK!

PLEASE SIGN ME UP FOR YOUR LIMITED-TIME SPECIAL OFFER THAT INCLUDES THE FOLLOWING:

___ 3 months of *INSIIDE TRACK* monthly newsletter & e-mailed *IT* updates -- $97.00

AND THE FOLLOWING **FREE** BONUSES…

- -- FREE copy of December 2009 *INSIIDE Track I*
- -- FREE copy of December 2009 *INSIIDE Track II*
- -- FREE 2 weeks of e-mailed *Weekly Re-Lay* short-term advisory service*** (in .pdf format **ONLY**)
- -- FREE additional month of *INSIIDE Track* monthly newsletter (4th month)
- -- FREE additional month of *INSIIDE Track* intra-month updates (4th month)
- -- Any corresponding *INSIIDE Track Special Reports* (if published during 4 months)

Other than this 2-week bonus, the ***Weekly Re-Lay is not part of this offer.
